Link to the Dataset:

Note: Use First 5000 rows of dataset from the original dataset given

1. Perform EDA and necessary pre-processing steps in dataset.

2. Using the LDA algorithm create the Topics (Min 10) for the Corpus
   NOTE: Use Title column

3. Compute the coherence score and print Topics Extracted.

4. Visualize the topics

5. Plot the dependency parser for any **two random sentences** from the entire corpus/dataset that has at least 10 words in the sentence. Make sure that dependency parser looks good and should be visually understandable.
